machine and can be turned in any direction, especially helpful when stringing fan patterns. They also allow you to switch from main strings to cross strings without having to remove and replace glide bars. There are two kinds: dual swivel, dual action fixed clamps that require you to lock two levers to clamp a string; and

dual swivel, single-action fixed clamps that require you to lock one lever. 360° glide bar clamps are clamps that rotate 360 degrees, but they are mounted on glide bars. Single swivel fixed refers to machines with only one clamp attached to the machine. Machines with this type of clamp will generally require a starting clamp or flying clamp for part of each string job.
